WAR MAPS

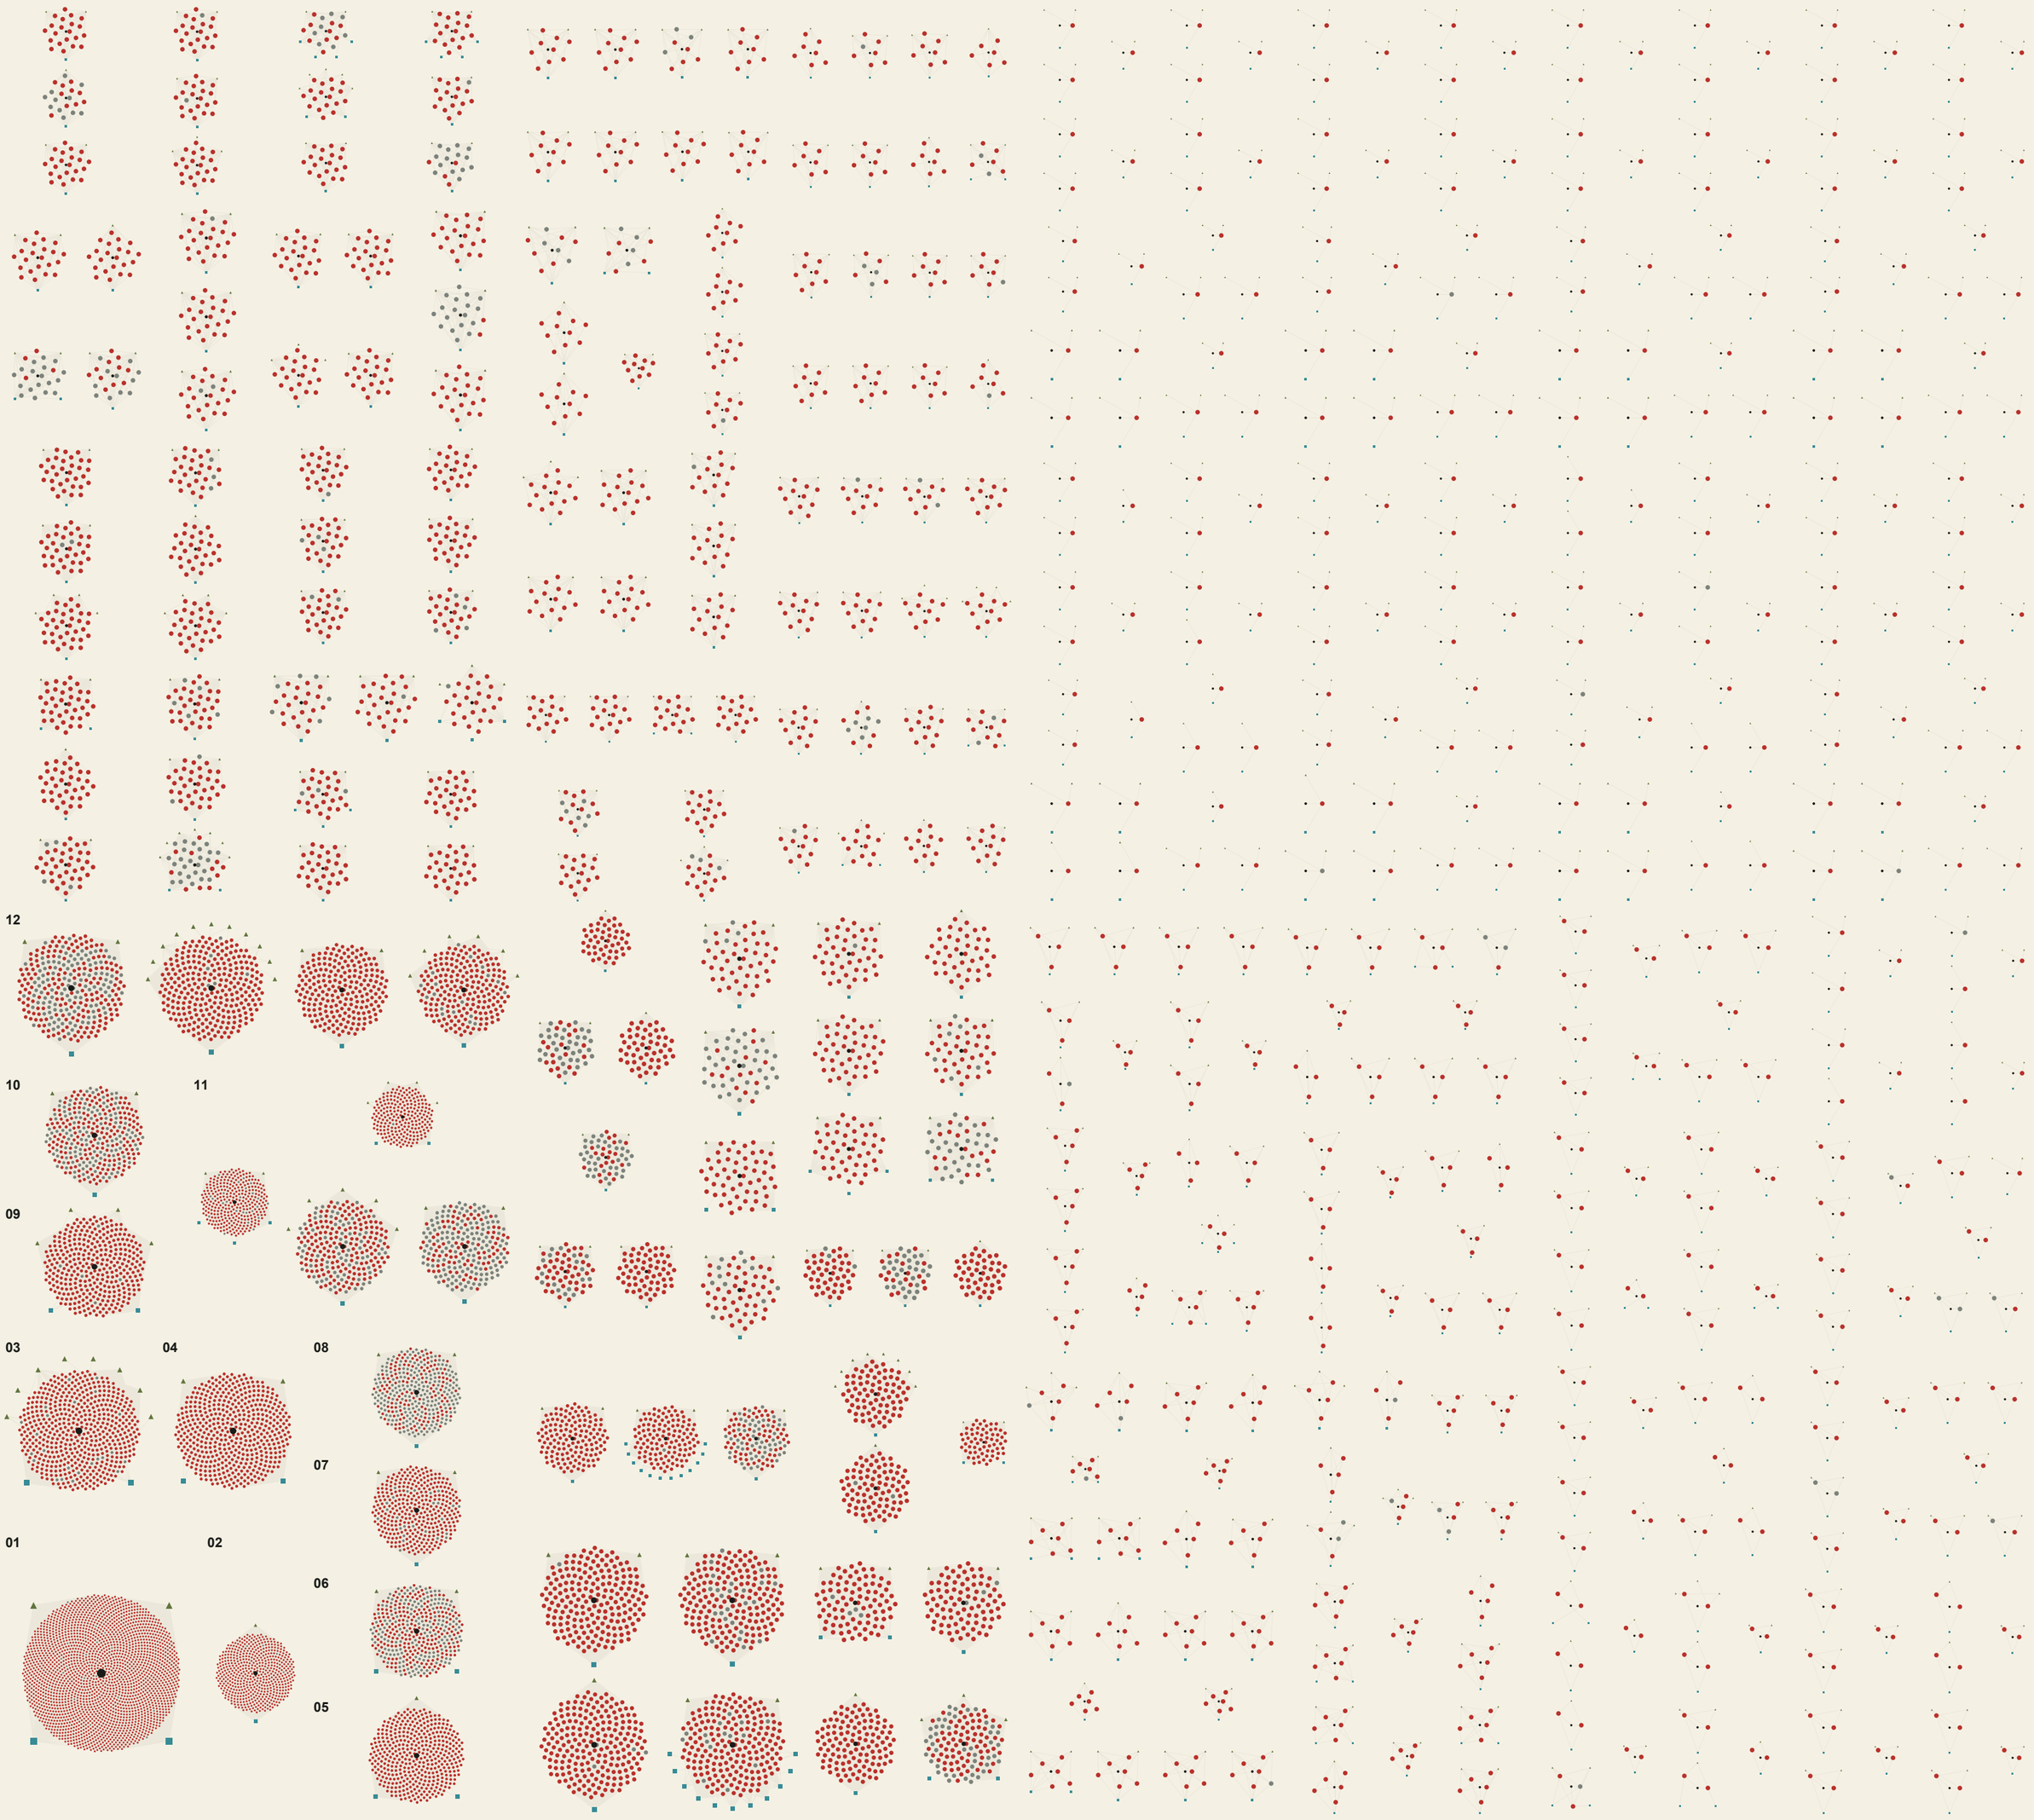

THE STRUCTURE OF CONFLICT

THE EVENT CONSTELLATION

2026

13,659 EVENTS / 539 CONFLICTS / 12,110 FATAL EVENTS

2026-01-01 to 2026-08-31 | 13,659 candidate records | No event sampling

NODE KEY

Black circle: conflict. Olive triangle: coded side. Teal square: event nation / country. Red dot: event with best fatality estimate > 0. Grey dot: zero or unknown best estimate. Thin grey lines connect every event to its conflict, recorded sides and country. Candidate and reviewed events use the same mortality colors.

LARGEST CONFLICT NETWORKS / NUMBERED IN THE FIELD

01 Russia - Ukraine / 2,294 events

02 XXX70 - XXX70 / 566 events

03 Israel: Palestine / 556 events

04 Israel: Southern Lebanon / 509 events

05 XXX100 - XXX100 / 420 events

06 Burkina Faso: Government / 406 events

07 Jalisco Cartel New Generation, Sinaloa Cartel - Los Chapitos - Sinaloa Cartel - Los Mayos / 367 events

08 Mali: Government / 363 events

09 Pakistan: Government / 355 events

10 Ethiopia: Government/Amhara / 328 events

11 Sudan: Government / 325 events

12 Pakistan: Balochistan / 301 events

READING THE STRUCTURE Each constellation is a conflict-specific incidence network: repeated events converge on shared sides and countries. Red concentrations reveal where fatal observations cluster. Sides and nations are repeated within each conflict, not merged into global actors; countries describe event locations, not citizenship or belligerency. Area allocation balances event volume and visibility. Spiral positions order events chronologically; distance is not geography or a measure of causality. Dense regions require digital zoom; the companion compressed JSON retains every event and link endpoint.

Sources: UCDP GED 26.1 (1989-2025) and locally loaded UCDP candidate releases through August 2026. Latest candidate revision replaces duplicate event IDs. All-time means available event history, not all wars in history; annual-only records are not invented as events. Network incidence representation informed by Barabasi, Network Science, chapter 2 (networksciencebook.com). No scale-free or causal claim.
